

The PRT is designed for use in rescue situations involving forcible entry and penetration.

The PRT is manufactured from aluminum (housing) for light weight and steel (ram) for strength. The PRT tool bits are manufactured from forged heat treated alloy steel to provide high impact strength and long tool life.

The PRT allows the operator to select from a wide range of tool and penetrator bits that best suit to the job at hand. The PRT tool bits are manufactured from forged heat treated alloy steel to provide high impact strength and long tool life.

RAM BAR

The PRT is a powerful, manually operated forcible entry and penetration tool. The PRT uses the "Slam and Ram" principle of operation to maximize its power and to retain the efficiency of one man operation. Because there is no deflection of the pounding force, all of the energy is used to strike effective, penetrating blows by a single person. It features a machine grooved non-slip handle, a collet ring that can lock the ram in any position to aid in leverage, and a tool retainer with its own locking ring that allows for quick and safe tool bit changes.

BULL POINT

The Bull Point tool bit is ideal for breaking concrete and masonry materials.

WIDE CHISEL

The Wide Chisel is used for prying, metal cutting, and its extra long length is perfect for reaching into areas that are extra deep and narrow.

NARROW CHISEL

The Narrow Chisel is good for prying, breaking bolts, and breaching brick and block walls.

LOCK BREAKER CLAW

The Lock Breaker Claw is used for prying and forcing open roll-up doors, elevator door, fire doors, windows, twisting open hasps and locks, and pulling large nails or spikes.

METAL CUTTING CLAW

The Metal Cutting Claw is made to cut the metal of automobiles, aircraft, metal structures such as corrugated sheds, etc.

CARRYING POUCH

The PRT Kit Carrying Pouch is made from tough, strong vinyl coated nylon and features velcro straps for easy access and worry free storage. It stores all the standard items that come with the PRT Kit, rolls up easily, and has two handy carrying straps so you can take the PRT anywhere.
